

**AMENDMENTS TO THE SPECIFICATION**

Page 1, line 2, after the title, please insert the following new paragraph:

**RELATED APPLICATIONS**

This application is a continuation of International Application No. PCT/GB02/02638, filed June 11, 2002, which claims priority to Great Britain Patent Application No.: 0206823.7, filed on March 22, 2002, and also to Great Britain Patent Application No.: 0114177.9, filed on June 11, 2001, the contents of each of which are incorporated by reference herein.

**FIELD OF THE INVENTION**

Page 1, before the start of the third paragraph, please insert the following:

**BACKGROUND OF THE INVENTION**

Page 2, before the start of the second paragraph, please insert the following:

**SUMMARY OF THE INVENTION**

Page 5, please replace the paragraph beginning on line 35 with the following amended paragraph:

A user could also seek a list of available locations with jukeboxes in accordance with the present invention.[[.]] A location request identifying a town, city and so forth, could be made to a central server. Alternatively, means could establish automatically the geographical position of the user and suggest suitable locations in the locality. This can be done using cell identification technology, or by using an integrated global positioning system in a mobile telephone or PDA. It would be possible for a user to ask, for example, for the nearest location where a particular track can be played.

Page 7, please replace the paragraph beginning on line 10 with the following amended paragraph:

The selection of tracks by a mobile communications device such as a mobile telephone facilitates the decoupling of the playback device and thus the likelihood of damage occurring to the jukebox may be reduced. Indeed, only the playback device needs to be installed in the public place to allow the person requesting the

track to hear and/or see a track when it is played. The associated receiving and/or processing devices may be located remotely, for example in an office or room not open to the public. As the public do not require direct access to the hardware of the jukebox to request tracks, listings of the tracks available may be distributed throughout the public place on, for example, inexpensive printed or laminated track menus. These menus are small and cheap to produce and can be readily updated or replaced, for example, to include new tracks as they become available. Video monitors could also be provided. These may take any form including conventional cathode ray tube monitors, liquid crystal panels, plasma displays, projectors and any other suitable display device.[[.]]
